### DETAILED ACTION

1. This Office Action is in response to Applicant's Amendment dated December 13, 2005 in response to USPTO Non-Final Office Action dated September 21, 2005.

The amendments to claims 1-4, the addition of new claims 5-6 and Applicant's remarks are sufficient to place the application in a condition for allowance as set forth herein below.

#### *Allowable Subject Matter*

2. Claims 1-6 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Relative to claim 1, the major difference between the teachings of the prior art of record (USP 5,561,343, Lowe and Pub. No. 2002/0075443, Shimizu et al.) and that of the instant invention is that said prior art of record **does not teach** a field emission display comprising a plurality of projected portions provided at each spacer mount position on a first panel substrate, wherein each said spacer is fastened to said plurality of projected portions by a recoil strength obtained when each said spacer is elastically deformed.

Relative to claim 4, the major difference between the teachings of the said prior art of record and that of the instant invention is that said prior art of record **does not teach** a field emission display with a method step for providing a plurality of projected portions at each space mount position on said first substrate, and a step of elastically deforming each said spacer by an external force so as to avoid positional interference of said spacer with said plurality of projected portions, assembling said spacer into a space mount position on said first panel substrate in said

Art Unit: 2629

elastically deformed condition , and releasing said external force in said assembled condition, thereby fastening said spacer to said plurality of projected portions.

Relative to claim 5, the major difference between the teachings of the said prior art of record and that of the instant invention is that said prior art of record **does not teach** a field emission display comprising a plurality of projected portions alternatively arranged at both end portions of each spacer mount position on said first panel substrate, wherein each said spacer is brought into pressure contact with said surfaces of the projected portions by a recoil strength obtained when each said spacer is elastically deformed.

Regarding claim 6, the major difference between the teachings of the said prior art of record and that of the instant invention is that said prior art of record **does not teach** a field emission display comprising a plurality of projected portions over the first panel substrate; and an elastic spacer between the first panel substrate and the second panel substrate, the elastic spacer being secured between the plurality of projected portions by a recoil strength obtained when each space is elastically deformed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Response to Applicant's Remarks***

4. Applicant's claim for priority and the submission of certified copies of documents supporting that claim filed on July 23, 2003 have been noted and entered in the record.

Applicant's remarks relative to claims 1-4 are rendered moot in light of the allowance

of said claims.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
